Dear IJCTT Team,

We have incorporated the review comments provided and made the necessary revisions to our paper. Below are the specific updates we have addressed:

The quality and ideas of the paper have been noted as good for the research field. We have revised the paper per the following comments:

Introduction Section: We have tweaked the introduction to clearly mention the research gap and introduce the problem effectively.

Novelty: The novelty of our work is now clearly addressed with a comparison to existing research findings

Literature Review: We have expanded the literature review to provide a more thorough background on the topic.

Analysis: The analysis section has been enhanced with additional chapters and a more detailed presentation of our research, supported by data.

Experimental Results: We have detailed the experimental results and their corresponding analysis, supported by graphical and tabular data in an editable format.

Images: High-resolution images have been used to ensure proper rendering in the final published paper, avoiding distortion upon zooming (Figures 1 to 4).

Journal Template: The paper has been strictly prepared using the updated journal template available on your website. We have adhered to all instructions and guidelines.

Results Discussion: A detailed discussion has been included on how and why we achieved better results compared to state-of-the-art techniques or those already reported in the literature.

Spell and Grammar Check: Spell and grammar checks have been performed, and there are no word breaks at the end of lines.

Citations: All citations have been reviewed to ensure there is no manipulation, including self-citations (both author and journal self-citations).

We kindly request your review of the revised paper, let us know if you require anything from us.

Thank you for your guidance and support.

Best Regards,
